

ICompare Web Search Engine Documentation

1. Purpose of Application

This web application is an implementation of comparing book and DVD prices which will invoke and interact with several real-world web services. With proper web service, the web application can present useful information required by user.

There are two options for search in my iCompare website: Books or DVDs. Then the user can search not only a particular book by entering the title, ISBN or author, but also a particular DVD by entering the title, or director.

2. Web Service Deployed

There are several web services deployed for different usage, which is listed as follows:

- Google Custom Search API: obtain useful information(such as price, link, title) about the book or DVD
- Flickr API : obtain a relevant image/picture of the book or DVD
- YouTube API: present trailers for DVDs.
- Own created RESTful web service: obtain useful information about the book or DVD from the local database
- eBay Finding API: present prices for book or DVD in eBay
- Amazon Product Advertising API: present prices for book or DVD in Amazon ; performing some simple sentiment analysis using Twitter's tweets to say whether the general opinions about the book or DVD are negative, positive or neutral
- Twitter API: performing some simple sentiment analysis using Amazon's reviews to say whether the general opinions about the book or DVD are negative, positive or neutral

3. Class Diagram

3.1 Entity Class

 Books
<p><i>Attributes</i></p> <pre> private long serialVersionUID = 1L private Integer bookid private String isbn private String booktitle private String author private String publicationtime private Double retailprice private String currencytype private String snippet </pre>
<p><i>Operations</i></p> <pre> public Books() public Books(Integer bookid) public Integer getBookid() public void setBookid(Integer bookid) public String getIsbn() public void setIsbn(String isbn) public String getBooktitle() public void setBooktitle(String booktitle) public String getAuthor() public void setAuthor(String author) public String getPublicationtime() public void setPublicationtime(String publicationtim public Double getRetailprice() public void setRetailprice(Double retailprice) public String getCurrencytype() public void setCurrencytype(String currencytype) public String getSnippet() public void setSnippet(String snippet) public int hashCode() public boolean equals(Object object) public String toString() </pre>

 Dvds

3.4 Flickr Class and Review Feedback Class

3.5 Jersey Client

4. Test Plan

4.1 Platform Details

- NetBean version: 7.2.1
- Imported Java package: Jersey 1.8, google-api-services-customsearch-v1-rev15-java-1.14.1-beta, google-api-services-youtube-v3-rev34-java-1.13.2-beta, FlickrResponse.jar, java-json.jar, jsoup-1.7.2.jar
- Instruction: just install the package and VS2010 above

4.2 Implementation

- Choose your search option: Book or DVD
- Input your search keywords
